CROP SUPPORT SYSTEM

WHY A CROP SUPPORT SYSTEM?

Haygrove crop support systems are designed to give:

- Superior lateral supports.
- Future flexibility on crop choice.
- An excellent return on your investment.

Haygrove crop support systems have been integrated in design with new and existing polytunnels, for maximum efficiency and crop output.

EFFICIENCY IN THE FIELD

The Haygrove crop support system is tailored to efficient husbandry. The chain and support strings can be neatly lifted to place and remove plant stock.

ADJUSTABLE FLEXIBILITY

Haygrove crop supports are designed with longevity and flexibility in mind. Adjustable chain locators allow for different support configurations, enabling you to provide the best support depending on the stage of plant growth. The system can be adjusted for different crops in following seasons.

RELIABLE DURABILITY

Replacing systems is costly in both materials and labour, unlike wooden supports, our steel crop supports are built to last. Haygrove crop supports will provide you with many seasons of use, regardless of which cane crops you choose to grow.
